Human Machine Interface

# XGT Panel XP Series

LS IS

Windows CE based new HMI

# XGT Panel XP Series

Fresh start with XP series suits your every requirement.

# neXt Generation Technology
## Advanced technology for the customers.

XGT Panel Series is a brand new HMI product with an intensive and advanced technology of LSIS to cope with the rapidly changing market situation. It is an innovative product having both reliability and convenience based on the Windows CE.

With the user-oriented convenience, it offers high resolution display, prompt data transmission and processing, and an user-friendly interface.

LSIS provides the Leading Solution to the automation field with the XGT Panel Series.

We are confident of our XGT Panel Series which contains high technology and our commitment to quality at the HMI market.

## Superb performance, convenient functions

- High and vivid distinction with 65,536 colors.
- Various vector symbols and high quality raster symbols.
- Support diverse file types including BMP, JPG, GIF, and WMF, etc.
- Simple movie clip effects with GIF animation.
- 10/100 BASE-T Ethernet interface.
- Convenient and easy screen editing.
- Strengthened data management (Logging, Recipe, and Alarm).
- Read function of a controller's state information (Monitoring and maintenance).
- Multi-lingual display up to 4 languages and easy switching.
- Offline program simulation.
- Tag function of the HMI S/W (Easy to change the address of the graphic objects).
- USB host for the use of peripheral devices (Mouse, keyboard, printer, etc.)
- Sufficient memory space for screen saving (10MB).

## Speed

XP series has Ethernet interface for the rapid transmission of data. XP series communicates with some PLCs and transmit data promptly through the Ethernet interface.

## Expression

XP series supports 65,536 full color display and its mass storage of the flash memory offers best quality.

## Variety

XP series supports not only BMP, JPG graphic file types but also WMF, GIF file for making a movie clip drawing on the screen.

## Multi-Language

XP series can display many languages which are supported on Microsoft Windows. Real-time conversion of four languages is available during run.

## Specialization

XP series strengthens advanced features such as Logging, Recipe, Alarm, Script, and Scheduler. It helps users for the liberal and practical use.

## Network

XP series enables users to implement data communication with several controllers at one time. The maximum 4 PLCs are connectable to a XP machine.

# Data processing

## Faster transmission of mass storage data

- XP series' transmission speed is improved with the Ethernet interface. It is faster(10 /100Mbps) than RS-232C interface (115Kbps).
- XP series includes a 10 MB memory, so it can offer advanced features such as upload/download drawing data, Logging, Alarm, and Recipe.
- XP series supports GIF, WMF file type as well as BMP, JPG, which makes it easier to draw.

Ethernet

## Easy accessible USB host

- 2 channels of USB interfaces are installed as a host.
- XP series is compatible to a variety of devices through the USB interface.

Print    Bar code reader    USB hub    Keyboard, mouse    USB movable HDD
## CF memory card and USB memory

- You can save the PLC data to a CF memory card or a USB memory.
- It can be converted into CSV file type.

PLC

Logging PLC data into CF memory card
- Analog touch panel eliminates scale marks to improve the resolution as compared to the matrix touch panel. It adopts an analog resistive touch panel for the better visibility and the free disposition of objects.
- It helps free locating of the objects.

Project file

CF Card

Memory stick
## Multi−language support

- It offers a real-time conversion of four languages and various choices of language for designers.
- You can switch the languages which you want to use during the operation with the pre-recorded string table.
- It offers the MS Windows-supported languages such as Chinese(prc), Chinese(Taiwan), Danish, German, English, Finnish, French, Greek, Italian, Korean, Norwegian, Polish, Portuguese, Russian, Swedish, Spanish, Hungarian, etc.

- It displays components of fixed values or word devices on the screen. Preset- component images can be used
- It provides a free movement with a user-defined path, a linear movement, and a device movement on the X-Y coordinates.

• Free movement

1   2   3   4   5

• Linear movement

1   2   3   4   5
# Display

## Diagnostic via program monitoring

↪ XP series' program monitoring function offers easy diagnostic without additional option to monitor PLC which is connected to HMI.

↪ The ladder program can be saved in CF card or USB memory.

↪ It offers several functions such as device search, subroutine search, label search and step search.
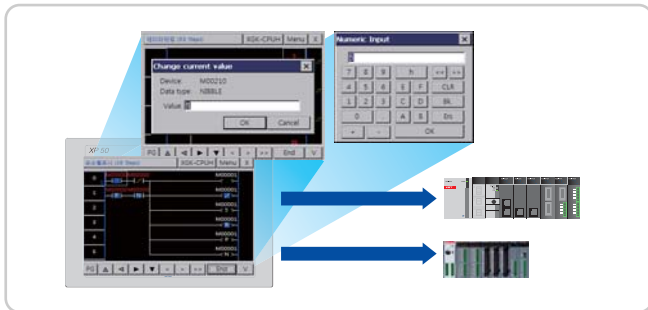

## Path-through

↪ When XGT Panel is connected to PLC via CPU port, monitoring and modification of PLC program can be done using Ethernet.

↪ The remote debugging can be executed.

Ethernet

Serial (CPU)
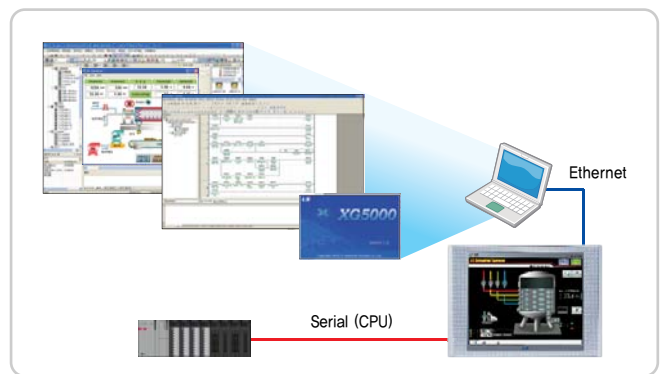

## Useful simulator function

### ↪ Offline simulation

↪ Operation can be executed without hardware.

↪ It supports monitoring and manipulation of device.

↪ Program error can be checked before sending to XGT Panel.

Simulator

Virtual device window
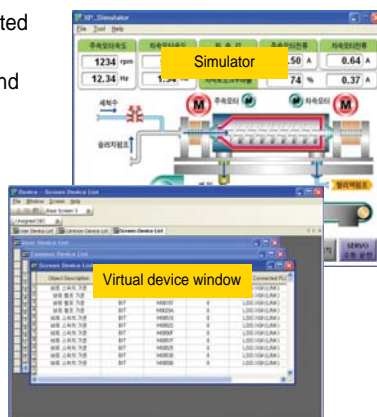

### ↪ Interworking with PLC simulator

↪ When LS PLC software, XG5000, is executed, XGT Panel simulator can be operated with XG5000 together.

Simulator

XG5000 simulator
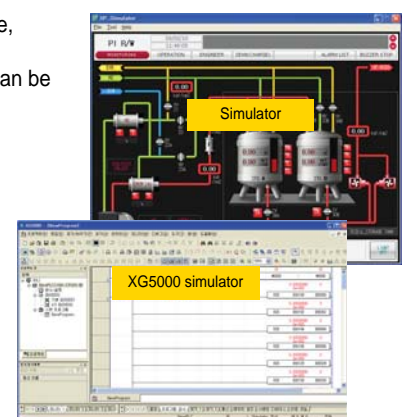

## RAPIEnet optic ring (XPO-EIMT)

↪ XPO-EIMT communication option card enables high speed communication via RAPIEnet.

↪ It supports daisy chain and ring structure (Dual port).

↪ RAPIEnet is more reliable and convenient communication methods compared to START communication.

**RAPIEnet**
Real-time Automation Protocols for Industrial Ethernet

Trouble Fail

Fast Recovery !!
# Project Printing

## Prompt display

### ⇲ Alarm

⇲ **History alarm**
It saves alarmed contents into a history file. You can classify the alarms in detail into the maximum 8 upper and lower class groups or alarm lists. Through the alarm explorer, you can choose some alarms to display. If you register a detailed screen to verify the alarms in detail, you can create a window which is connected to the alarms.

⇲ **Flow alarm**
It displays a current alarm on the lower position of the screen for the rapid response to users. Flowing alarm can be configured to use only with a specific condition. You can apply it to transmit company or device information.

⇲ **System alarm**
If a serious fault or a trouble of the HMI occurs, the system alarm informs users.
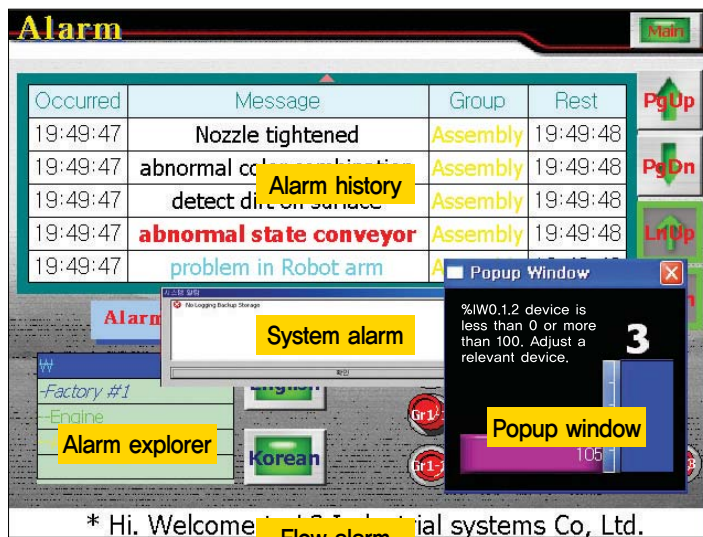

## Easy management with backup files

### ⇲ Logging

⇲ It offers a cyclic logging operating repeatedly according to the time and a device status, and a conditional logging which works under the condition of the device.

⇲ The max. number of 32 logging areas (condition) are available and each size of the area can be expanded up to 256Kbyte.

⇲ It is capable of saving the maximum 32 Words
(cf. 32 bits for the bit logging) by one logging.

⇲ Logging is basically saved on the internal SRAM (256Kbyte), and you can run a back up to a CF memory, a USB memory and a movable HDD, etc.

⇲ You can verify the logging data on the XGT Panel through the logging view object.

⇲ Converted CSV types can be edited on Microsoft Excel.

Read data of the CF memory card to the PC

PLC
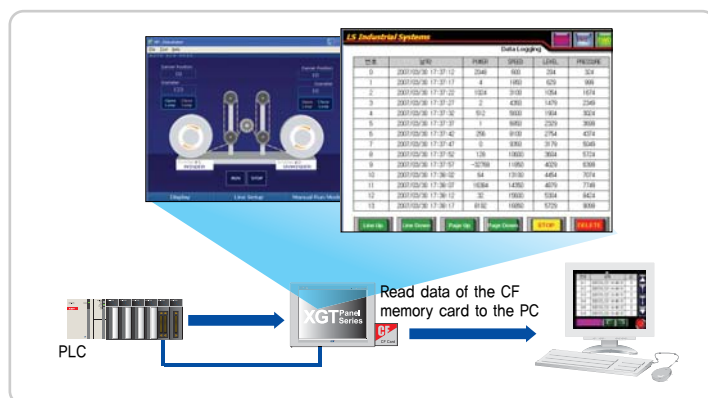

## Email service of alarm and logging data

⇲ XGT Panel offers the function of e-mail service to the registered address as a CSV file.

⇲ It can send Logging data with the selected logging group.

⇲ E-mail service includes the function of sending e-mails / notifications to the users when user-defined alert cases occur

⇲ The logging and alarm file sent to PC can be open with EXCEL.

Alarm !!
## Recipe

Recipes provide an easy method for operators and users to change the value of hundreds of settings in automation devices. Backup memory is installed, it makes it possible to use the recipe function to transfer setting values to other equipment. It is able to register up to 32 recipes at the XP-Builder. The maximum 100 Word/Dword devices and 16 data blocks are able to assign in each recipe. Recipe data is saved in the nonvolatile memory of the XP series. It maintains the latest data when the power is shut off. You can register and edit the recipe data through the XGT Panel or Microsoft Excel.

Read/write data between PLC and XGT Panel

PLC

**XGT** Panel Series

Edit on MS Excel

Read/write data to the nonvolatile memory
## Scheduler

Scheduler appoints operations and times to do the operation on the specified time. Bit On/Off, setting a Word value, and a script operation are available. Each scheduler can assign operations up to 8. Schedulers can be produced up to 32.

Write
## Print

You can print a screen or a history of alarm events from the HMI. It is available to connect to a printer with a USB port.

**XGT** Panel Series

Print
## Bar code scan

ASCII data which is inputted by a bar code scanner can be saved into a user-defined PLC or an internal memory of the XGT Panel. User can set a completion bit to verify whether the XGT Panel read correct data. The bar code communication operates only with a built-in RS-232C interface of the XGT Panel.

PLC

Bar code reader

RS-232C
## Security

When you operate the PLC control with Objects such as switches, input and output objects, you can prescribe the security level to the authorized users only. Total 10 security levels are supported, and a low level password can access to a higher level. After an approval of the security level, the session is only maintained during a period of time.
# Development Tool : XP-Builder

## XP-Builder Functions

### Multi-thread program

➜ You can run multiple programs at one time and use drawing data from another program.
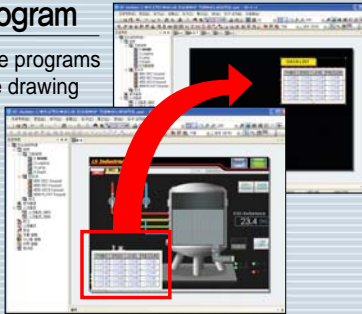

### Debugging program

➜ You can verify some errors which happens to the data at the output window.

➜ Display details of the errors.

### Cross reference

➜ Display devices and tags which are in use.
## Edit program : XP-Builder

### Project

➜ Add and edit screens and special functions of the project.

### Data view

➜ Display the objects which is used on a current screen.

➜ Show the property window by double click.

### Output bar

➜ Output errors about the data and display search results.

➜ Display details of errors.

### Toolbox

➜ Draw objects and diagrams.

### Library

➜ Categorized libraries are displayed and the preview is supported.

➜ Easy register and deletion of the user library.

➜ Drag & Drop operation.

**Project**

**Base screen**

**Data view**

**Output bar**
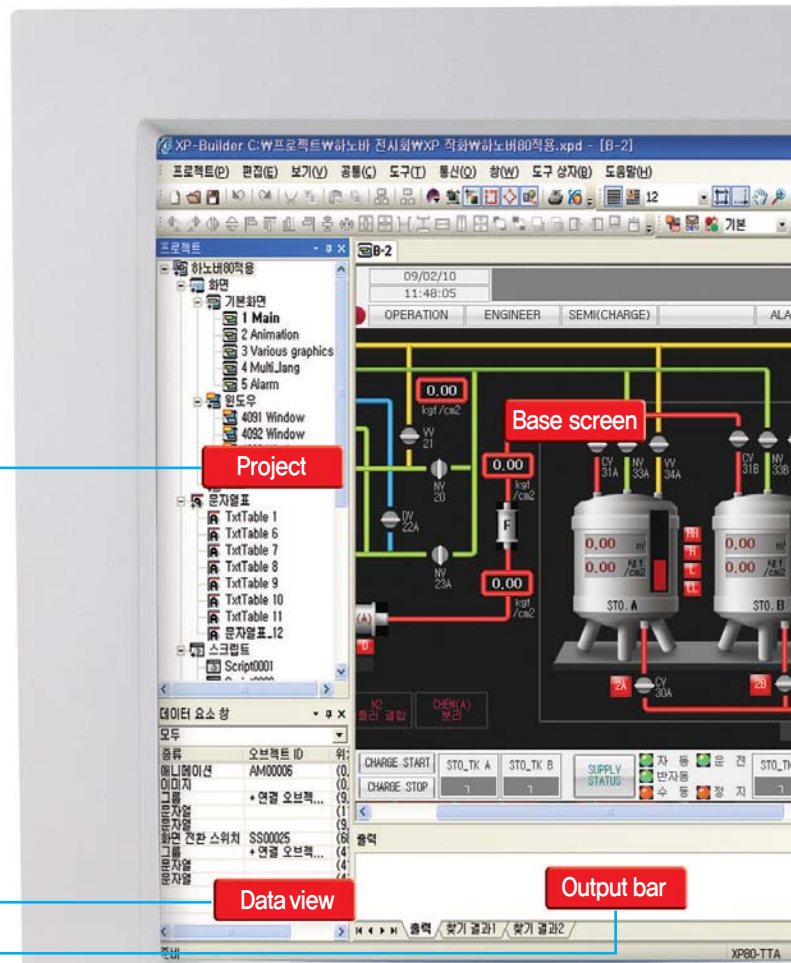

## Tag

↪ User can rename a device address to use it as an object.

↪ If you assign a tag to the set up device of an object, you can change the addresses of devices at a time.

↪ It is available to register up to 10,000.

## Simulation

### Off-line program simulation

↪ You can confirm the drawing data on a PC without a XGT Panel.
↪ Device monitoring and operation can be checked on a PC.
↪ The simulator supports same operations as a XGT Panel.
↪ Data errors and normal operations could be checked before XP-Builder transmits the drawing data to the HMI.

가나다라마바사아자차카타파하
가나다라마바사아자차카타파하
가나다라마바사아자차카타파하

## GIF animation

↪ You can use GIF animation to take effects according to the state of specified bit.
You can make and add a movie clip of the actual spot to inform users accurately.
(A movie clip file can be produced using a commercial GIF animator program.)

• GIF movie clip

## Script

### Flexible script language

↪ Script language can supplement the offered object function to draw the data.

↪ Script language is a structured language such as C programming language for the convenience of users.

↪ Script language with complex arithmetic operations and various functions can reduce a load of external controllers.

↪ Grammar inspection can validate the script languages.

### Various script use

↪ XP-Builder has various script usages such as global script, object script, etc.

↪ Global script operates with On/Off signal of an assigned device. It is able to run a script operation by periods using a special device.

↪ The object script is available to do a target device operation of the object.

↪ Script can be operated at the moment when a screen is opened(or closed).

### Useful script toolbox and error inspection.

Easy edit

### ⬀ Cable standards and wiring method

#### ⇥ Ethernet cable standards and wiring

| Item | Description |
|---|---|
| Cable standard | • Type: UTP / FTP / STP cable<br>• Standard: CAT.5 / Enhanced CAT.5 / CAT.6 |
| Direct cable | Communicate with a PC or a PLC/Controller through a hub.<br> |
| Cross cable | Connect with a PC or a PLC/Controller directly (1:1 connection).<br> |

> **NOTE**
> 1) Ethernet setting
>    • Ethernet setting is on the XGT Panel.
>    • Communication parameters with a PLC/controller are set up on the XP-Builder.
> 2) 1:1 connection
>    • Under the conditions that is impossible to use a LAN, a one-to-one connection with a cross cable is suited to send/receive a project data.
> 3) Making a cable
>    • If a Lock part of the Ethernet jack is damaged, it cannot be fixed to a RJ45 connector (Ethernet connector). It occurs a contact badness.
>    • A Plug Cover is recommended.

#### ⇥ Tool cable standards and wiring

| Item | Description |
|---|---|
| Cable standard | • Name: PMC-310S (Download cable) • Length: A soft tube type 1m |
| Structure and wiring | Direct connection to a PC<br> |

#### ⇥ XP30-BTE connector pin assignment

| Item | Description |
|---|---|
| Wiring |  |

#### ⇥ RS-232C cable standards and wiring

| Item | Description |
|---|---|
| Cable standard | • (UL) Style 2464 AWG24 cable is recommended.<br>• Max cable length is 15m.<br>• Shielded cables are recommended. |
| Structure and wiring | Connect to PLC or Controller (1:1).<br> |

> **NOTE**
> 1) Communication setting
>    • Communication parameters with a PLC/controller are set up on the XP-Builder.
>    • Refer to the communication user manual about the communication wiring with a PLC / controller.
>    • XGT Panel does not support a flow control.
> 2) Making a cable
>    • Under the conditions that is impossible to use a LAN, a one-to-one connection with a cross cable is suited to send / receive a project data.
>    • Make a cable meet PLC / controller's standard requirements.

#### ⇥ RS-422/485 cable standards and wiring

| Item | Description |
|---|---|
| Cable standard | • (UL) Style 2464 AWG22 cable is recommended.<br>• Max cable length is 500m.<br>• Shielded cables are recommended. |
| Structure and wiring | Connect to PLC or Controller (1:1).<br> |

> **NOTE**
> 1) Communication setting
>    • Communication parameters with a PLC/controller are set up on the XP-Builder.
>    • Refer to the communication user manual about the communication wiring with a PLC / controller.
>    • Set up a terminal resistance using a dip switch.
> 2) Making a cable
>    • A cable should be produced as a male type because the XGT Panel's connector is a female type.
>    • Connect the 4th(TX+) to the 8th(RX+) and the 5th(TX-) to the 9th(RX-) to make a RS-485 cable.

| DIP switch | | Description of the switch | |
|---|---|---|---|
| | | 1 | No use | |
| **4 3 2 1** | | 2 | A | Normal operation (Default) |
| | | | B | Update Windows CE |
| **B** | | 3 | A | Watchdog On (Default) |
| **A** | | | B | Watchdog Off |
| | | 4 | A | RS-422/485 terminal resistance (120Ω) |
| | | | B | No RS-422/485 terminal resistance |
